EDUCATION

De La Salle University — Manila

B.S. Industrial Engineering, Minor in IT
2019 — 2024

Self-taught full-stack engineer and solo founder. I designed, built, and shipped **UniDorms.ph** end to end — a production two-sided marketplace with live payments and escrow settlement — and run its growth through Facebook ads and in-house video. I pair an Industrial Engineering background with AI-accelerated development to ship product fast.

EXPERIENCE

Founder & Sole Engineer — UniDorms.ph

Sachi Tech OPC · 2026 — Present

- Built and shipped **UniDorms.ph** solo — a full-stack student-housing marketplace, live in production and serving **~842 organic searches/day**.
- Engineered the full stack: Next.js 14 / React frontend, Supabase Postgres backend, and 50+ Node API routes for booking, messaging, reviews, and disputes.
- Built escrow-style **Xendit** settlement with a first-to-pay-wins atomic claim, automatic refunds for race losers, and admin-approved payouts.
- Shipped landlord KYC, a tiered host-reputation system, analytics dashboards, and transactional email — deployed continuously on Vercel.
- Ran Facebook ad campaigns and produced launch videos and visual content in-house to drive early demand.

Sales Manager — Digital Network Communications

2024 — Present

- Manage existing project sites and key accounts end to end, coordinating with technical teams to deliver telecom solutions on schedule.
- Drive outreach through cold calling, email, and referrals; conduct site feasibility inspections.

Accounting Intern — PGA Cars

Apr — Aug 2023

- Handled data entry for bank records and job orders; assisted with audits and the scheduling of payables for liquidation.
